7. Deploy the NetApp mNode: NetApp HCI with RHV 1

7. Deploy the NetApp mNode: NetApp HCI with RHV

The management node (mNode) is a VM that runs in parallel with one or more Element software-based storage clusters. It is used for the following purposes:

- Providing system services including monitoring and telemetry
- Managing cluster assets and settings
- Running system diagnostic tests and utilities
- Enabling callhome for NetApp ActiveIQ for additional support

To install the NetApp mNode on Red Hat Virtualization, complete the following steps:

1. Upload the mNode ISO as a disk to the storage domain. Navigate to Storage > Disks > Upload and click Start. Then click Upload Image and select the downloaded mNode ISO image. Verify the storage domain, the host to perform the upload, and additional details. Then click OK to upload the image to the domain. A progress bar indicates when the upload is complete and the ISO is usable.
2. Create a VM disk by navigating to Storage > Disks and click New. The mNode disk must be at least 400 GB in size but can be thin-provisioned. In the wizard, enter the name of your choice, select the proper data center, make sure that the proper storage domain is selected, select Thin Provisioning for the allocation policy, and check the Wipe After Delete checkbox. Click OK.

The VM is created.

- After the VM becomes available, power it on, and open a console to it. It begins to load the NetApp Solidfire mNode installer. When the installer is loaded, you are prompted to start the RTFI magnesium installation; type **yes** and press Enter. The installation process begins, and after it is complete, it automatically powers off the VM.

9. Power on the mNode VM. Using the terminal user interface (TUI), create a management node admin user.

To move through the menu options, press the Up or Down arrow keys. To move through the buttons, press Tab. To move from the buttons to the fields, press Tab. To navigate between fields, press the Up or Down arrow keys.

Authentication

Please create a local admin user.

Username	admin
Password	*****
Confirm Password	*****

< **OK** > <Cancel>

10. After the user is created, you are returned to a login screen. Log in with the credentials that were just created.
11. To configure the network interfaces starting with the management interface, navigate to Network > Network Config > eth0 and enter the IP address, netmask, gateway, DNS servers, and search domain for your environment. Click OK.

NetApp Management Node -> Network -> Network Config -> eth0

Hit 'tab' to navigate between the form and buttons. Use ↑/↓ to navigate between fields. Start typing or hit ←/→ to enter the field to make changes. Press 'enter' with a field selected, or hit 'tab' then 'enter' to submit all pending changes.

*** denotes required fields.**

Method:	static
Link speed:	0
*IPv4 Address:	10.63.172.141
*IPv4 Subnet_Mask:	255.255.255.0

< OK > <Cancel> < Help >

You can now close the TUI interface.

- SSH into the management node using the management IP, escalate to root and register the mNode with the HCI storage cluster.

- Using a browser, log into the management node GUI using <https://<mNodeIP>>. mNode or Hybrid Cloud Control facilitates expansion, monitoring, and upgrading the Element cluster.

- Click the three parallel lines on the top right and click View Active IQ. Search for the HCI storage cluster by filtering the cluster name and make sure that it is logging the most recent updates.
